

Popup Menu

Different types of menus

- In Android, a menu is a user interface component that provides a list of options for the user to choose from. There are different types of menus in Android:
 - 1.Options Menu:** The options menu is a standard menu that appears at the **top of the screen** when the **user taps the menu** button or the overflow button. It typically contains **actions related to the current activity or fragment**, such as settings, search, or help.
 - 2.Context Menu:** The context menu is a menu that appears when the user **long-presses** on a view or item. It provides context-specific **actions related to the selected view or item**.
 - 3.Popup Menu:** The popup menu is a menu that **appears as a floating window above the current activity or fragment**. It displays a list of options and is often triggered by **tapping on an icon or a specific view**.
